Treinamento em Cirurgia Robotica

Suggested learning pathway for minimally invasive surgery

Visual - See it
Auditory - Hear/Say it
Read/Write - It
Kinesthetic - Do it

Treinamento em Cirurgia Robotica

Editorial

Undermining and bullying in surgical training: A review and recommendations by the Association of Surgeons in Training

Peyton's 4-Steps-Approach

1. **Demonstration:** The teacher performs the skill in real time without comment. This step is taken to provide a benchmark.
2. **Deconstruction:** The teacher performs every step slowly with an added explanation. The skill should be divided into smaller subsections.
3. **Comprehension:** The student describes every step of the skill whereupon the teacher performs on instruction. The description and execution do not occur simultaneously.
4. **Execution:** The student simultaneously narrates and executes step by step.

The screenshot shows a web browser window with the URL davincisurgerycommunity.com. The page features a blue header with the **da Vinci Surgery Community** logo and the text "da Vinci Surgery Customer Portal". A "Sign In" button is located in the top right corner. Below the header is a navigation menu with links for Home, Clinical, Systems - I & A, Training, Marketing Resources, and Support.

Welcome

Welcome to the *da Vinci* Surgery Online Community, where practitioners of *da Vinci* Surgery come to discover new techniques, create conversations and build their own network of colleagues from the *da Vinci* Surgery community.

[Join The Community](#)

Who is this site for?

Membership to this site is free, but is restricted to practitioners, personnel or residents/fellows connected to, or in the process of considering investment in, a *da Vinci* Surgery program. All accounts are validated upon sign-up. Accounts which cannot be validated will have basic access to the community. If you have any issues please contact us at community@intusurg.com.

This site is *not* open to the general public.

Product video designed to align the Xi technology and benefits to the ISI mission

Treinamento em Cirurgia Robotica

The screenshot shows the da Vinci Surgery Community website. The header includes the logo, navigation links (Home, Clinical, Systems - I & A, Events, Training, Marketing Resources, Support), and user information (Logged in as armando melani). A dropdown menu for 'Training' is open, listing options like 'dV Technology Training Pathway', 'Xi Video Training', and 'Online Training & Assessment'. The main content area features a 'Commitment to Evidence-Based Medicine' article and a 'Featured Videos' section with two video thumbnails and descriptions.

This screenshot shows the 'Online Training and Assessments' page. It includes a search bar, a 'My Training' button, and a list of training modules. A yellow box highlights an important note about selecting the correct training set based on the system and software version. The training modules list includes details such as duration, language, role, and software version for various courses.

System	Software	Instruments & Accessories	Language	I am a ...	Module Name	Duration	Language	Role	Software	Action
Select System	Select System For Soft...	Select Instruments & ...	Select Language	Surgeon, OR Staff, Resident / Fellow, First Assist, Robotic Coordinator	dV SI System Modules For OR Staff	187 Minutes	English	OR Staff	P9	Enroll
					SI Modules for Surgeons - English	108 Minutes	English	Surgeon	P9	Enroll
					S Modules for Surgeons - English	93 Minutes	English	Surgeon	N/A	Enroll
					dV SI System Modules for Robotic Coordinators	231 Minutes	English	Robotic Coordinator	P9	Enroll
					dV S, System Modules for Residents & Fellows - English	219 Minutes	English	Resident / Fellow	N/A	Enroll
					dV S, System Modules for OR Staff - English	171 Minutes	English	OR Staff	N/A	Enroll

3 Docking the Patient Cart

Cannulae & Trocars

 Demonstrate remote center and remote center boundaries and assemble the *da Vinci* cannula, cannula seal and obturator during the discussion

1. Instrument arm
 - a. Cannula
 - 8 mm: reusable, 11 cm and 16 cm lengths
 - 8 mm with outlet: reusable, 11 cm and 16 cm lengths
 - 5 mm : reusable, 11 cm length
 - Remote center markings
 - Cannula mount reads cannula type
 - b. Obturator
 - 8 mm blunt: reusable
 - 8 mm bladeless: disposable
 - 5 mm blunt: reusable
 - c. Cannula seals
 - Green cannula seal: disposable, for 8 mm cannula, provided in drape kit
 - White cannula seal: disposable, for 5 mm cannula
2. Camera arm
 - a. 3rd party 12 mm and 8.5 mm trocars
 - b. *Intuitive* reusable 8.5 mm camera cannula

NOTE: Cannula mount must match brand of camera arm cannula. For additional information refer to the 3rd party products list (PN 871770)
3. Assistant ports: 3rd party cannula selected by the surgeon

Basic Port Placement

 Only basic port placement philosophy and a straight-line docking approach are covered here. Insufflate prior to marking out port placement. Refer to procedure card/procedure guide for port placement and patient positioning recommendations.

1. Camera arm placement: place the camera port 10-20 cm from target anatomy (closer to 20 cm when possible)
2. Instrument arm placement:
 - a. For arms 1 and 2, measure 8-10 cm from the camera port, perpendicular to the axis between the target anatomy and camera port
 - b. For arm 3, measure an additional 8-10 cm from the closest *da Vinci* port
 - c. Triangulate as needed
 - d. Instrument arms should be at least 10 cm from target anatomy

da Vinci[®] Si[™] Surgical System System Overview In-Service Guide: *Surgeon*

Dock the Patient Cart

Complete (✓)

1. Dock camera arm
 - a. Confirm molding is properly seated and cannula mount wings are open
 - b. With one hand, hold back the drape with thumb above mount while pressing and holding port clutch behind the cannula mount
 - c. With opposite hand, insert cannula into mount and pinch mount closed in front
 - d. Once properly seated, close quick-click cannula mount wings
 - e. Position insufflation outlet to the side
2. Dock instrument arms
 - a. Confirm molding is properly seated and cannula mount wings open
 - b. With outside hand, hold back drape above mount with thumb while pressing and holding port clutch behind the cannula mount
 - c. With opposite hand, insert cannula into mount and pinch mount closed in front
 - d. Once properly seated, close quick-click cannula mount wings
3. Check system setup
 - a. Check camera arm alignment
 - b. Ensure that numbers on instrument arms are facing forward, and that telescoping axes are ~45° from one another
 - c. Reposition instrument arms if necessary
 - Stabilize cannula at level of the skin and reposition utilizing arm port clutch and/or clutch button
 - d. Release tension on tissue if needed
 - Use one hand to stabilize cannula while the other pushes and holds the upper port clutch button to allow the tension to release
 - Attach insufflation to the assistant port (avoid connecting to the camera port to reduce potential for fogging)
4. Insert the camera
 - a. Place the endoscope in the cannula and attach the camera assembly to the camera arm sterile adapter (with the buttons on the camera facing the center column)
 - b. Twist camera assembly gently to ensure engagement with the camera arm
CAUTION: If not fully engaged, the endoscope may fall out
 - c. Insert the camera cables into the strain relief support on the camera arm
5. Under direct visualization, check position of remote centers. When repositioning remote center, stabilize cannula at the level of the skin.
6. Remove camera
 - a. Release the camera head cables from the strain relief support.
 - b. Squeeze the release levers on either side of the camera arm sterile adapter and gently pull the endoscope straight up and out of the cannula.

Cannula Installed

da Vinci® Surgeon Skills Drills Practicum & Setup Guide da Vinci Surgery

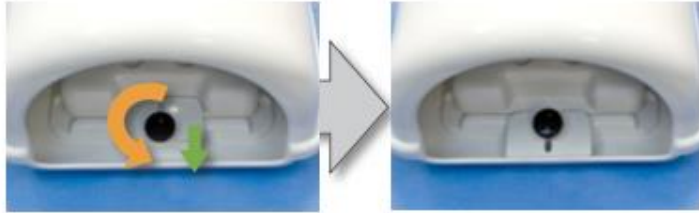

1 da Vinci Training Exercise Setup ^ Exercises

da Vinci Skills Model Components

Skills Model Shell	Skills Model Base	Exercise Tray	Exercise Mounts
 <p>The shell has ports for camera and instrument insertion.</p>	 <p>The locking plate and thumb screw secure the exercise tray to the base. Grooves along the side of the base attach to the shell.</p>	 <p>The exercise tray is a connective surface for exercise mounts. It attaches securely to the base with a thumb screw and locking plate.</p>	 <p>For easy exercise mount exchange, attach pegs on exercise mounts to wells in the exercise tray. Be sure to push down firmly.</p>

1.1 Exercise Tray Setup & Exchange

- Rotate the thumb screw one half turn to loosen it slightly
- Slide the locking plate away from the tray

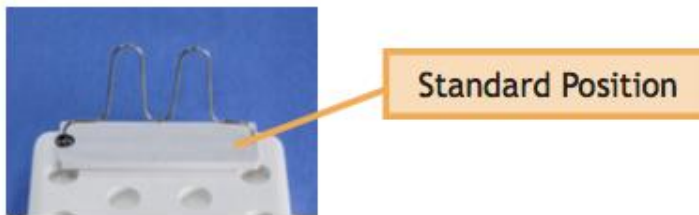

c. Remove exercise tray from skills model base

d. Position the exercise mount and insert pegs into exercise tray wells as shown (in the standard position)

e. Push down on the mount until you hear a click

f. Slide the exercise tray with mount back into the skills model base

g. Slide the locking plate into place & tighten the thumb screw

da Vinci Surgery

1.3 da Vinci Si System Patient Cart Setup & Docking

Setup

- da Vinci Skills Model with ports placed for target anatomy ① as shown
- Place the skills model on a table or cart oriented with the open end facing away from the Patient Cart as shown at right

Exercise

- Position Patient Cart for straight-line docking (pelvic procedure)
 - ▶ Camera arm aligned, in sweet spot and with 2nd setup joint opposite 3rd arm
 - ▶ Instrument arm numbers and sterile adapters facing forward
- Direct assistant or trainer to drive Patient Cart to skills model
- Dock the camera and instrument arms to the skills model
- Verify camera and instrument arm alignment, correctly adjusting as necessary
- Simulate releasing tissue tension and placement by “burping” the surgical arms

da Vinci Surgery

5.3 Level 3: Around-the-World - Advanced Suture Pad

Setup

- Same as exercise 5.2
- Pass the 0-Vicryl CT-1 suture, cut to 15 cm to the surgeon with laparoscopic grasper. This can be done through the open end of the model.

Exercise

- Grasp the CT needle with the *Mega Needle Driver* in the dominant hand, two thirds of the way from the tip of the needle
- Following the numbered pathway shown, drive the needle from the center of the first dot to the center of the next dot
- Tie an anchor knot at the first set of dots and continue driving the needle from "out" to "in" in a clockwise fashion until you run out of suture. Tie another anchor knot here and cut the suture.
- Pass another 0-Vicryl CT-1 suture cut to 20 cm
- Tie an anchor knot at the next set of dots and continue driving the needle from "out" to "in" in a clockwise fashion until you run out of suture. Tie another anchor knot here and cut the suture.
- Pass another 0-Vicryl CT-1 suture, cut to 15 cm. Repeat the previous step until you reach the first dots and tie an anchor knot and cut the suture.

Suggestions for proper suture management:

- Use the pulley method for pulling the excess suture out (using both the needle drivers alternately to pull)
- Pull the excessive suture alternating needle drivers using the hand over hand method
- Make sure to keep the instrument tips in view. The suture should not be pulled out completely.

Pay special attention to:

- Keeping needle driver tips in view at all times
- Keeping the suture intact

Treinamento em Cirurgia Robotica

da Vinci[®] Training Passport Technology Training Pathway: Surgeon

PHASE IV Continuing Development

Attend surgeon-led course(s) (Course details available in the *da Vinci* Training Passport brochure and course catalog. If not available in your market, please check with your *da Vinci* representative for course details.)

Complete at least two additional activities after initial case series:

- Surgeon lecture program
- Complex *da Vinci* procedure observation
- Complex *da Vinci* procedure video review
- *da Vinci* surgery webinar
- Peer-to-Peer consultation via Surgical Congress
